

"It's the IRAP® 2.0."

MediVet ACS

BEYOND IRAP®: A SYSTEMIC APPROACH TO PAIN AND INFLAMMATION MANAGEMENT

## What Vets are Saying About MediVet ACS

MediVet's Autologous Conditioned Serum (ACS) has made a breakthrough in the way riders, owners, trainers, and veterinarians are able to block and terminate inflammation in horses.

Unlike other options, including Platelet Rich Plasma (PRP) and Interleukin-1 Receptor Antagonist Protein (IRAP®), that are typically injected into a specific joint or area of injury, MediVet ACS is the first regenerative therapy option of its kind, able to be administered intravenously to help the whole body.

"I've used it on hundreds and hundreds of horses, and I've had excellent results. Regenerative medicine is the future, as we move away from drugs. ACS enhances the horse's ability to protect and heal itself through the delivery of concentrated anti-inflammatory proteins and growth factors generated from the horse's own blood."

- Dr. Kristian Rhein, DVM

The ability to be injected IV means that MediVet ACS can travel through the horse's bloodstream offering a systemic, preventative approach to whole horse wellness that fights lameness, reduces recovery time after exercise, and provides a natural way of managing pain and inflammation.

"ACS is a great treatment because you get a large volume of the product. I've had great luck treating suspensory origins, suspensory branch injuries, tendons, as well as [inflammatory airway disease] and a number of horses that have PSSM (Equine polysaccharide storage myopathy)."

- Dr. Maia Aerni, DVM
